

CASESTUDY #2015

Leavitt Machinery acquired a Vancouver based company and needed help in relocating the plant's machinery. Leavitt Machinery needed to move 30 industrial machines from Vancouver BC to Langley BC.

RELOCATING 30 MACHINES

To relocate the facility, Leavitt hired the experienced industrial moving crew at ACL Crane & Rigging. Any time a company is required to move 30 industrial machines any distance, strategic planning is required to ensure everything goes smoothly and safely. This case study is about the move of over 30 machines from a wide open facility to a facility with tight space constrictions.

Relocating 30 Machines from Vancouver to Langley BC

THE CUSTOMER | Leavitt Machinery

Leavitt Machinery is a sales, rental, parts, service and training company located throughout the Western Provinces of Canada as well as Washington and Oregon. Providing equipment options for their customers, Leavitt Machinery is committed to safety and excellence throughout the different branches of their business.

Since it was founded in 2001, the Leavitt Machinery team has worked to build a company founded on innovative fleet management, exceptional industry knowledge, and a wide variety of industry leading products.

THE CHALLENGE

ACL Crane & Industrial Movers were required to move and relocate over 30 industrial machines into tight quarters at the new facility in Port Kells BC. Whenever there is a space challenge, ingenuity is required in the planning to incorporate specialty rigging techniques, in order to keep the machines and the crew safe.

Murphy's law states, "anything that can go wrong, will go wrong." An industrial moving company's experience will help lay out plans that keep this motto in mind and prevent "the wrong actions". ACL Industrial Movers knew the new location for the machines was tight. Tight spaces require specific planning and measuring to ensure the large pieces of equipment will fit. ACL Crane & Industrial Moving made sure they measured accurately, planned accordingly and executed their plan to perfection to ensure the project success.

THE SOLUTION

Whenever there is a space challenge, the only way to prevent issues from arising is to ensure accurate measurements. This also requires specialized industry knowledge to be able to execute custom rigging and moving techniques.

The crew used the right tools, used specialized rigging techniques and flawlessly executed their plan to move machines into place. With a proper contingency plan in place (but not needed in the end), ACL Industrial Movers positioned the machines into their new tight quarters and professionally placed the units.

THE RESULTS

ACL Crane & Rigging | Industrial Movers were able to disassemble, package, load, transport, unload and place all 30 units with zero damage.

Each of the machines were professionally relocated and installed in the Port Kells location. There were no lost time accidents and the ACL Industrial Moving crew executed the project flawlessly.

CUSTOMER TESTIMONIAL

“CHAD AND THE ACL INDUSTRIAL MOVING TEAM WERE AMAZING AT MOVING OUR MACHINES. THEIR ORGANIZATION OF THEIR TEAM HELPED MAKE THE PROCESS FEEL INCREDIBLY EFFICIENT.

I HIGHLY RECOMMEND USING ACL INDUSTRIALMOVERS FOR ALL YOUR INDUSTRIAL MOVES.”
